Genomic & Epidemiological Surveillance of Bacterial Pathogens

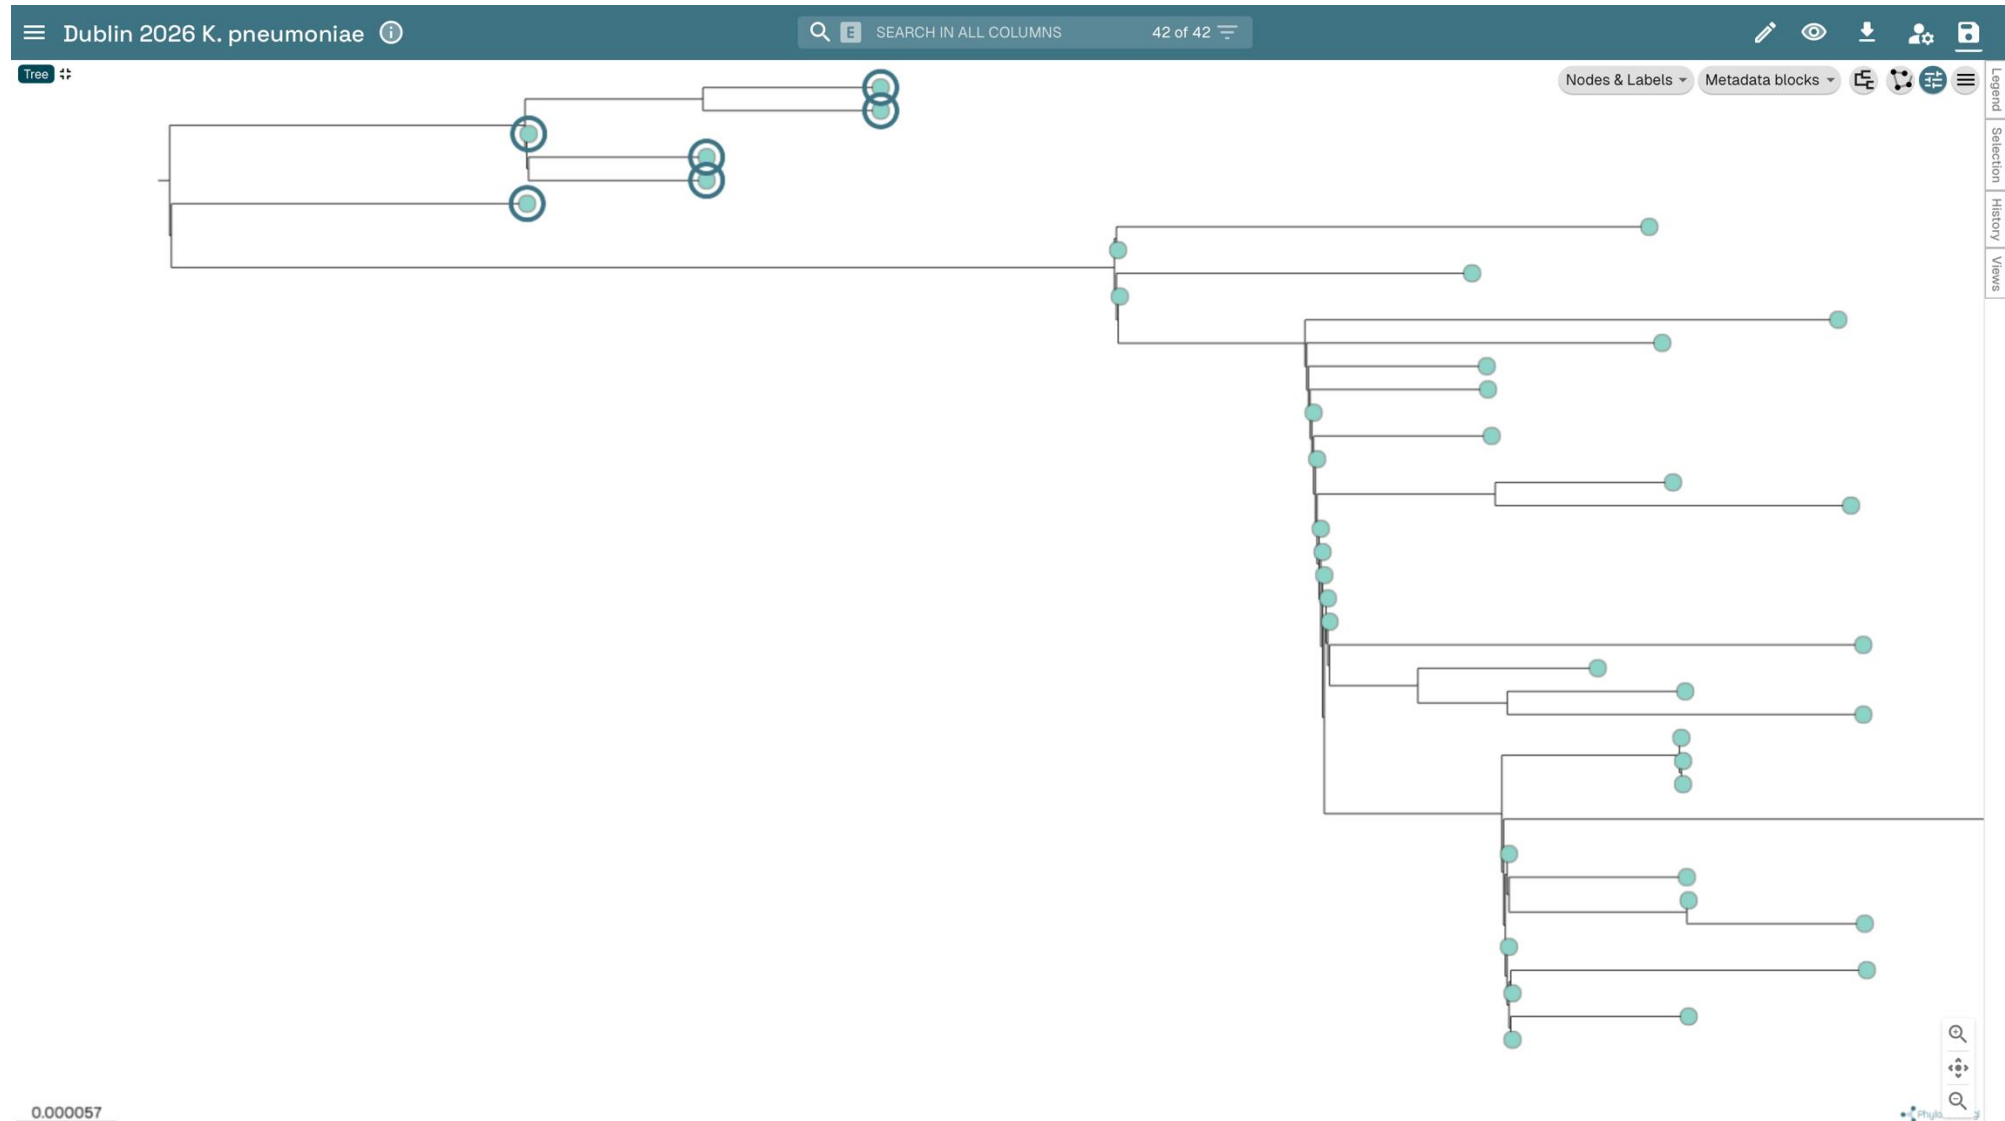

22-26 June 2025

Module 6: Web tools for Genomic
Epidemiology
Julio Diaz Caballero

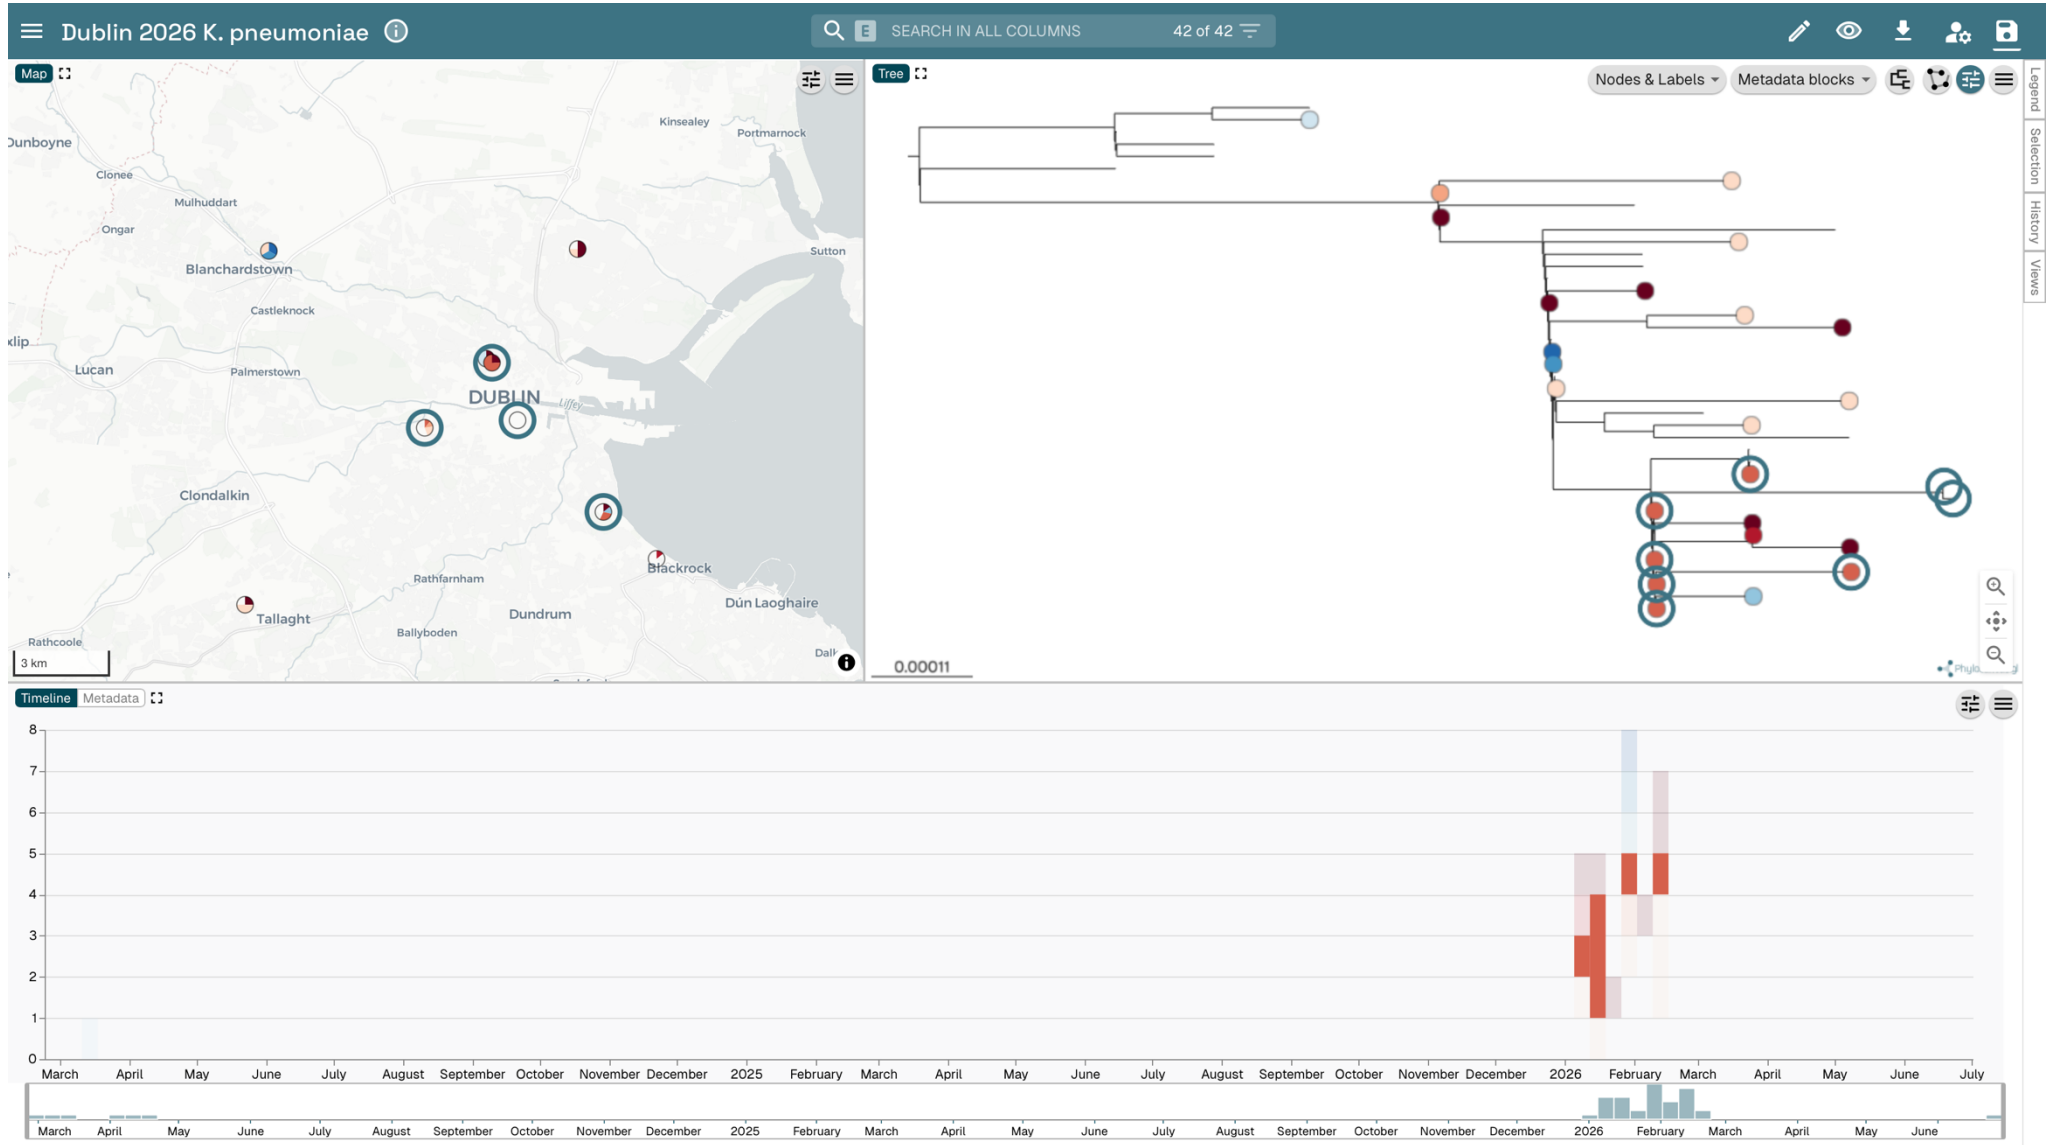

Exercise Workflow

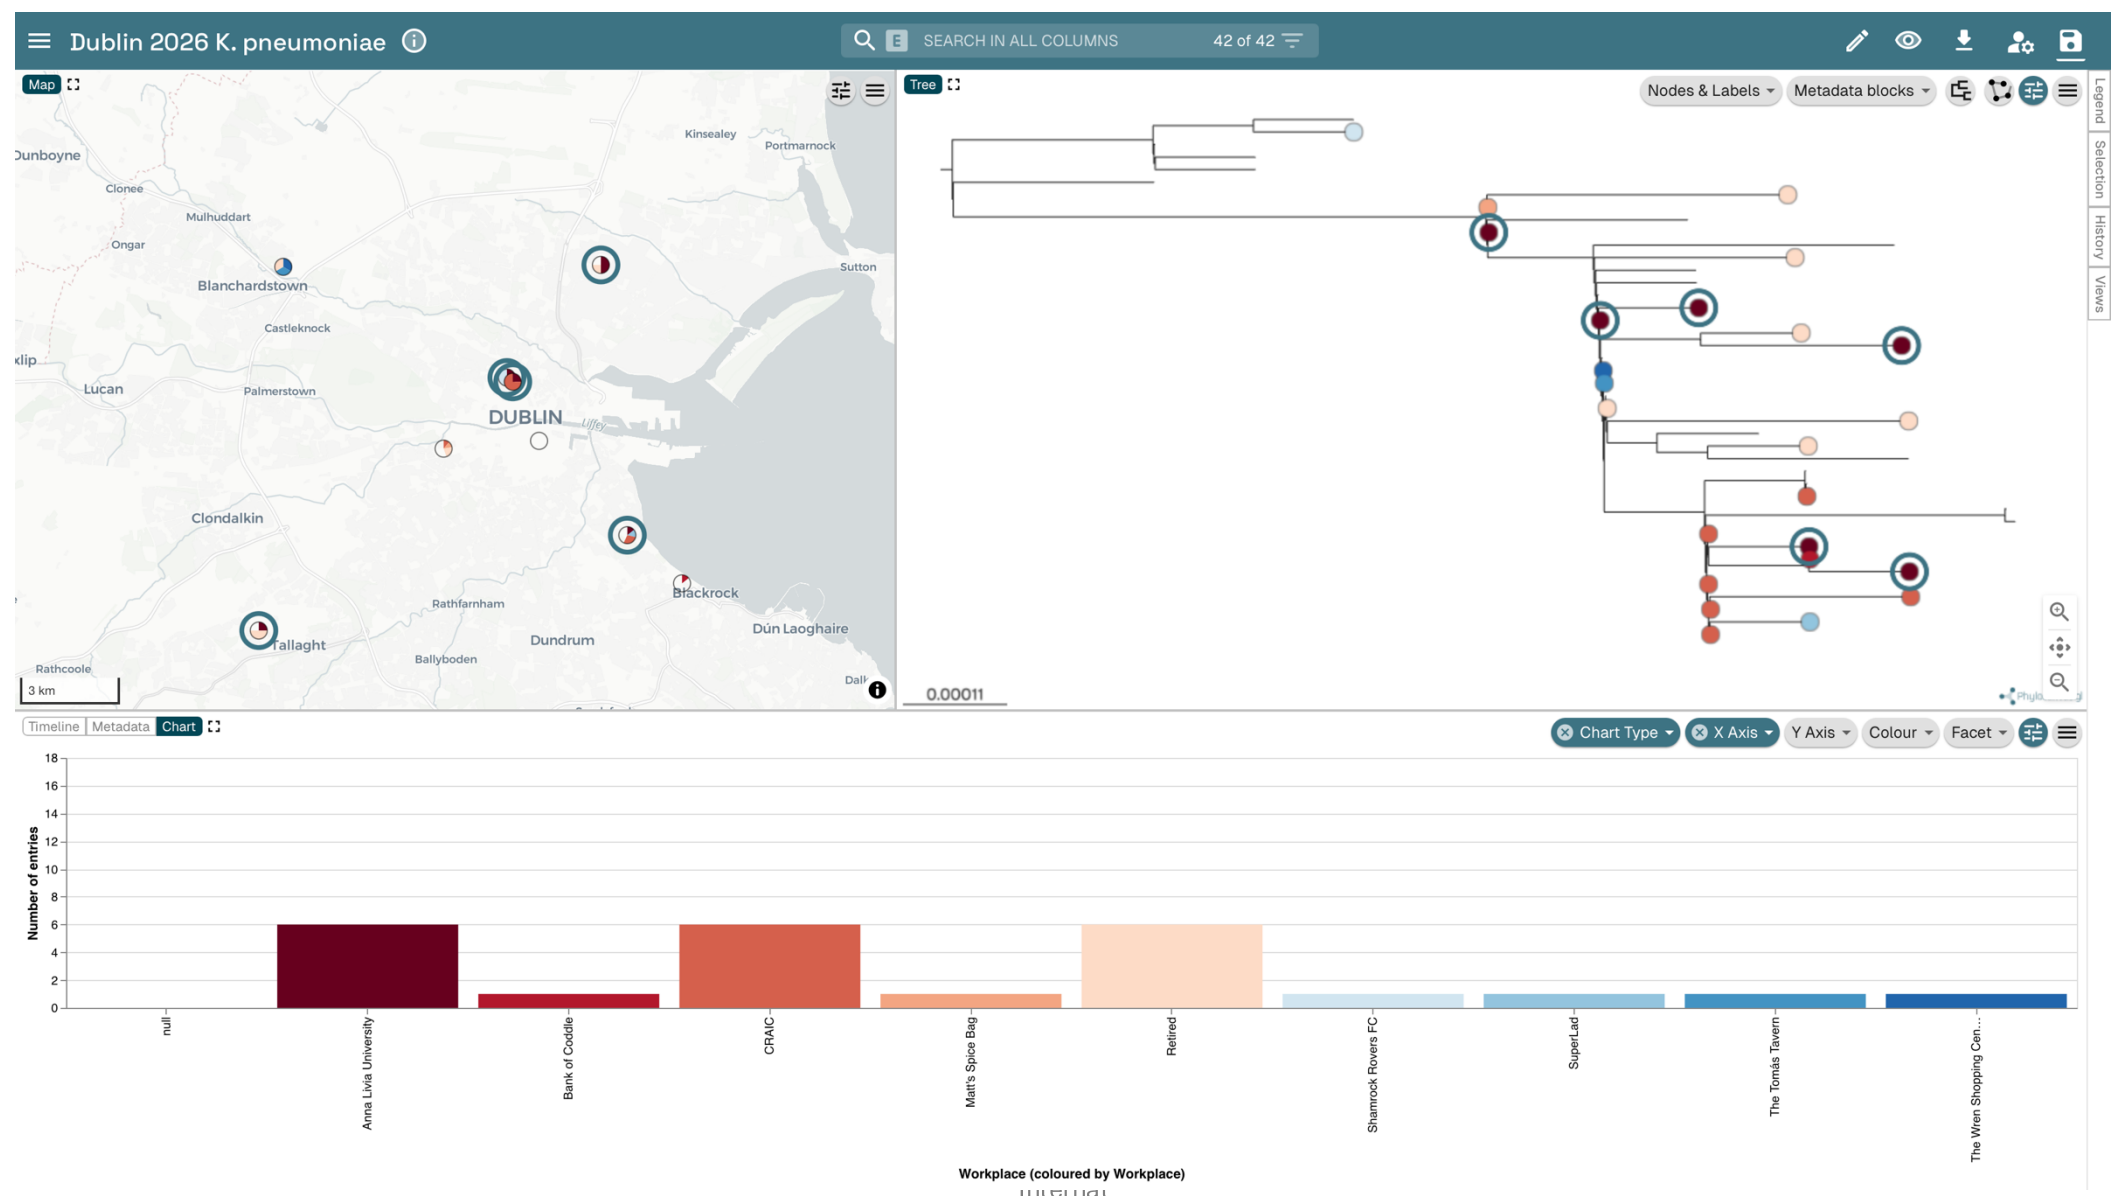

Was it useful to include genomes from a previous outbreak? Is the current outbreak related to the 2024 (Mar–Apr) outbreak?

Is the CRAIC campus the origin of the outbreak?

Should we investigate another location in the city?

Write the one-sentence public-health recommendation, then name the single most valuable next dataset.

example

Act on the campus water, chase the shared source, and get movement data next.
